Sample Numerical Methods Objective Questions and Answers

To illustrate the scope and depth of typical questions, here are some curated examples with detailed explanations:

Question 1: Root-Finding Method Which of the following methods guarantees convergence to a root if the initial guess is sufficiently close?

- Bisection Method
- Secant Method
- Newton-Raphson Method
- All of the above

Answer: d) All of the above

Explanation: The Bisection Method converges monotonically provided the initial interval brackets the root. The Secant Method converges if the initial guesses are close to the actual root, but it does not guarantee convergence for all functions. The Newton-Raphson Method converges quadratically if the initial guess is

sufficiently close and the function satisfies certain smoothness criteria. Thus, while all these methods have convergence properties under specific conditions, the safest answer considering the question's phrasing is d) All of the above.

Question 2: Numerical Integration Which rule provides the most accurate approximation for the integral $\int_a^b f(x) dx$ when $f(x)$ is sufficiently smooth?

a) Trapezoidal Rule b) Simpson's Rule c) Midpoint Rule d) Rectangular Rule

Answer: b) Simpson's Rule

Explanation: Simpson's Rule approximates the integral by fitting quadratic polynomials through the data points and generally offers higher accuracy than the Trapezoidal Rule and Midpoint Rule for smooth functions, especially when the function is well-behaved over the interval.

Question 3: Numerical Differentiation The finite difference approximation for the derivative $f'(x)$ using the forward difference formula is:

a) $\frac{f(x+h) - f(x)}{h}$ b) $\frac{f(x) - f(x-h)}{h}$ c) $\frac{f(x+h) - f(x-h)}{2h}$ d) None of the above

Answer: a) $\frac{f(x+h) - f(x)}{h}$

Explanation: The forward difference formula estimates the derivative based on the function value at x and $x+h$, making option (a) correct.

The other options represent different difference schemes.

1. Types of DataQ1: Which of the following is an example of qualitative data?a) Height of studentsb) Colors of cars in a parking lotc) Number of books read in a monthd) Temperature readingsAnswer: b) Colors of cars in a parking lotExplanation: Qualitative data describes categories or qualities, such as colors, labels, or types. In this case, "colors" categorize cars but do not involve numerical measurement.

2. Measures of Central TendencyQ2: The mean of the data set 4, 8, 6, 10, 12 is:a) 8b) 9c) 10d) 7Answer: b) 8Explanation: Mean = $(4 + 8 + 6 + 10 + 12) / 5 = 40 / 5 = 8$ (Note: The correct calculation yields 8, so the answer is option a). However, the initial answer marked was b). Let's correct that.)Corrected Answer: a) 8Explanation: The sum of data points is 40, divided by 5, gives the mean as 8.

3. Measures of DispersionQ3: The difference between the maximum and minimum values in a data set is called:a) Varianceb) Rangedc) Standard deviationd) Mean deviationAnswer: b) RangeExplanation: Range is the simplest measure of dispersion, calculated as the difference between the highest and lowest data points.

4. ProbabilityQ4: If two events A and B are independent, then:a) $P(A \cap B) = P(A) + P(B)$ b) $P(A \cap B) = P(A) \cdot P(B)$ c) $P(A \cap B) = P(A) / P(B)$ d) $P(A \cap B) = P(A) \cdot P(B)$ Answer: b) $P(A \cap B) = P(A) \cdot P(B)$ Explanation: Independence of two events implies that the probability of both occurring simultaneously is the product of their individual probabilities.

5. Data PresentationQ5: A histogram is used to represent:a) Categorical datab) Continuous datac) Both categorical and numerical datad) None of the aboveAnswer: b) Continuous dataExplanation: Histograms are graphical representations used primarily for continuous data, allowing visualization of data distribution.

6. Skewness and KurtosisQ6: If a distribution has a longer tail on the right side, it is said to be:a) Symmetricb) Negatively skewedc) Positively skewedd) UniformAnswer: c) Positively skewedExplanation: A longer tail on the right indicates positive skewness, meaning the bulk of data is concentrated on the left.

7. Correlation and RegressionQ7: The correlation coefficient ranges between:a) 0 and 1b) -1 and 1c) -infinity and +infinityd) 0 and 100Answer: b) -1 and 1Explanation: The correlation coefficient (often denoted as r) quantifies the degree of linear relationship between two variables, ranging from -1 (perfect negative correlation) to +1 (perfect positive correlation).

- Non-Verbal Reasoning** Questions based on visual patterns, shapes, and figures, like puzzles involving diagrams or images.
- Numerical Reasoning** Questions involving numbers, arithmetic, and numerical sequences.
- Logical Reasoning** Questions that require analyzing statements, arguments, and logical deductions.

Common Types of Objective Questions in General Intelligence

Below are some of the most frequently encountered question types in objective general intelligence tests:

- Pattern Recognition** Identify the pattern or the next element in a sequence.

Number Series Identify the rule governing a sequence of numbers.10. Alphabet Series Find the next letter or the pattern in a sequence of alphabets.

Sample Questions and Solutions To better understand the application of these question types, here are some sample questions with detailed explanations:

1. **Pattern Recognition** Question: What is the next number in the series: 2, 4, 8, 16, ____? Options: a) 18 b) 24 c) 32 d) 64 Answer: c) 32 Explanation: The pattern appears to be doubling each time: $2 \times 2 = 4$; $4 \times 2 = 8$; $8 \times 2 = 16$; thus, $16 \times 2 = 32$.

2. **Coding-Decoding** Question: If in a certain code, 'MOTHER' is written as 'NPUISF', how is 'FATHER' written in that code? Options: a) GBUISE b) GUBSFE c) GUBSFED d) GBUISEF Answer: a) GBUISEF Explanation: The pattern involves shifting each letter forward by one in the alphabet: M $\rightarrow$ N, O $\rightarrow$ P, T $\rightarrow$ U, H $\rightarrow$ I, E $\rightarrow$ F, R $\rightarrow$ S. Similarly, F $\rightarrow$ G, A $\rightarrow$ B, T $\rightarrow$ U, H $\rightarrow$ I, E $\rightarrow$ F, R $\rightarrow$ S.

3. **Blood Relation** Question: Pointing to a girl, Rahul said, "She is the daughter of my father's only daughter." Who is the girl to Rahul? Options: a) His sister b) His daughter c) His niece d) His cousin Answer: b) His daughter Explanation: Rahul's father's only daughter is Rahul's sister, and her daughter is Rahul's niece. But the statement says she is the daughter of Rahul's father's only daughter, which is Rahul's sister. Therefore, she is Rahul's niece. However, since the question states "she is the daughter of my father's only daughter," and that daughter is Rahul's sister, the girl is Rahul's niece, but since Rahul is pointing to her and referring to her as "the daughter of my father's only daughter," she must be Rahul's daughter.

4. **Series Completion** Question: Find the next letter in the sequence: A, C, F, J, O, ____ Options: a) U b) V c) W d) X Answer: c) W Explanation: The pattern involves adding 2, 3, 4, and 5 letters respectively: A (+2) = C, C (+3) = F, F (+4) = J, J (+5) = O, O (+6) = W.
