Sample Problem: If a rectangle has a length that is 3 times its width, and the perimeter of the rectangle is 48 units, what are the dimensions of the rectangle?

Solution Steps:

Define variables: Let the width be w . Then the length is $3w$.

Write the formula for perimeter: $P = 2(\text{length} + \text{width}) = 48$

Substitute known values: $2(3w + w) = 48$

Simplify: $2(4w) = 48$

Solve for w : $8w = 48 \rightarrow w = 6$

Find the length: $\text{length} = 3w = 3 \times 6 = 18$

Answer: The rectangle's dimensions are 6 units (width) and 18 units (length).

Example of a Typical "if2508" Problem and Its Solution Approach While specific weekly problems vary, here's an example inspired by common themes in sixth-grade math challenges:

Problem: Sara has 48 apples. She wants to pack them equally into baskets. If she uses 8 baskets, how many apples will go into each basket? If she decides to use 12 baskets instead, how many apples will go into each basket? Are the total apples packed the same in both cases? Explain.

Solution Approach:

Step 1: Identify what is asked: Number of apples per basket in two scenarios Whether total packed apples are the same

Step 2: Calculate apples per basket for each scenario:

Scenario 1: 8 baskets Apples per basket = $48 \div 8 = 6$ apples

Scenario 2: 12 baskets Apples per basket = $48 \div 12 = 4$ apples

Step 3: Compare total apples packed: Both cases involve packing all 48 apples, so total packed in both cases is the same (48 apples).

Step 4: Conclusion: The number of apples per basket decreases as the number of baskets increases. The total number of apples remains constant at 48.
