Analyzing the 2013 Paper: Typical Questions and Solutions

A key part of preparing for the S1 exam is practicing questions similar to those in the 2013 paper. Here, we analyze some typical questions and outline strategies for solving them.

Sample Question 1: Calculating the Mean and Median

Given a data set: 5, 7, 9, 12, 14, 14, 16. Find the mean and median.

Solution Approach:

Mean: Sum all values and divide by the total number of data points. Sum

$= 5 + 7 + 9 + 12 + 14 + 14 + 16 = 77$
 Number of data points = 7
 Mean = $77 / 7 = 11$
 Median: Arrange data in order (already sorted). The middle value in an odd set is the median. Median = 9 (the 4th value in the ordered list)
 This question assesses basic descriptive statistics, a fundamental skill in the S1 syllabus.
Sample Question 2: Probability Using a Tree Diagram
 A bag contains 3 red, 2 blue, and 5 green balls. Two balls are drawn without replacement. Find the probability both are blue.
Solution Approach:
 First draw: Probability of drawing a blue ball = $2/10$.
 Second draw: Given the first was blue, remaining blue balls = 1, total remaining balls = 9. Probability of second blue = $1/9$.
 Combined probability = $(2/10) \times (1/9) = 2/90 = 1/45$.
 This question tests understanding of probability rules and careful reasoning when drawing without replacement.
